                                                                                             SUBUNIT: FORMS COMPLEXES IN VIVO WITH FOCAL ADHESION KINASE 1,
ADAPTE PROTEIN CRKL AND LYN KINASE CAN HETERODIMERIZE WITH C.
(BY SIMILARITY). INTERACTS WITH NEPHROCYSTIN AND PTKZB.
SUBCELLULAR LOCATION: FOCAL ADHESIONS. UNPHOSPHORYLATED FORM
LOCALIZES IN THE CYTOPLASM AND CAN MOVE TO THE MEMBRANE UPON
TYROSINE PHOSPHORYLATION (BY SIMILARITY).
ALTERNATIVE PRODUCTS: 2 ISOFORMS; CAS-B (SHOWN HERE) AND CAS-A
ARE PRODUCED BY ALTERNATIVE SPLICING.
                                                                                                                                                                                                                                                                                                                                                                                     . -!- PTM: FOCAL ADHESION KINASE 1 PHOSPHORYLATES THE PROTEIN AT THE YDYVHL MOTIF: THE SRC FAMILY KINASES ARE RECRUITED TO THE PHOSPHORYLATE SITES AND CAN PHOSPHORYLATE OTHER TYROSINE RESIDUES. TYROSINE PHOSPHORYLATION IS TRIGGERED BY INTEGRIN MEDIATED ADHESION OF CELLS TO THE EXTRACELLULAR MATRIX.

-!- DISEASE: APPEARS TO HAVE A CENTRAL FUNCTION IN TRANSFORMATION OF CELLS TO THE CONTRACT PROCESSES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  INTERACTS WITH NEPHROCYSTIN AND PTK2B (BY SIMILARITY).

-!- SUBCELLULAR LOCATION: FOCAL ADHESIONS AND STRESS FIBERS.
UNPHOSPHORYLATED FORM LOCALIZES IN THE CYTOPLASM AND CAN MOVE TO
THE MEMBRANE UPON TYROSINE PHOSPHORYLATION.

-!- ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG ISOFORM (SHOWN HERE)
AND A SHORT ISOFORM; MAY BE PRODUCED BY ALTERNATIVE SPLICING.
-!- TISSUE SPECIFICITY: WIDELY EXPRESSED. HIGHER EXPRESSION IN LUNG,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          "Tyrosine phosphorylation of Crk-associated substrates by focal adhesion kinase. A putative mechanism for the integrin-mediated tyrosine phosphorylation of Crk-associated substrates.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       "A novel signaling molecule, p130, forms stable complexes in vivo with v-Crk and v-Src in a tyrosine phosphorylation-dependent manner."; EMBO J. 13:3748-3756(1994).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         of differentiation or adaptive processes that maintain muscle homeostasis. This sequence can be used in the detection, diagnosis, prophylactic and therapeutic treatment of diseases such as those involving aberrant muscle cell development and functional activity. It is also used in the treatment of muscular and myotonic dystrophies, skeletal myopathies such as Duchenne muscular dystrophy and Becker's myotonic dystrophy, heart failure, cardiac hypertrophy, myocarditis, myofiber atrophy, etc. The Csl gene sequence can also be used in gene therapy, for the production of transgenic animals and for drug screenir
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is the xenopus chisel protein (Csl), that is a member of the EF-Hand protein super family and is involved in signalling pathways. Csl protein is localised to the nucleus and does not show significant homology to any known protein. Structural homology between Csl and scallop regulatory myosin light chain is however detected. It is predominantly expressed in heart and skeletal muscles and is activated after the differentiation of cells. Csl functions in regulation aspects
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated nucleic acids encoding chisel, used to develop products for treating cardiomyopathy, cardiac hypertrophy, heart failure and muscular myopathies -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 of the EF-Hand protein super family and is involved in signalling the protein super family and is involved in signalling to the mouse Csl protein is localised to the nucleus and has 86% homology ct to the mouse Csl. Structural homology between Csl and scallop regulatory cx myosin light chain is also detected. It is predominantly expressed in cycle art and skeletal muscles and is activated after the differentiation of coaltive processes that maintain muscle homeostasis. This sequence can be used in the detection, diagnosis, prophylactic and therapeutic ct treatment of diseases such as those involving aberrant muscle cell cc development and functional activity. It is also used in the treatment of muscular and myotonic dystrophies, skeletal myopathies such as Duchenne cmuscular dystrophy and Becker's myotonic dystrophy, heart failure, cardiac hypertrophy, myocarditis, myofiber atrophy, etc. The Csl gene cc sequence can also be used in gene therapy, for the production of transgenic animals and for drug screening.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The patent discloses novel target genes abnormally expressed in heart tissues and their corresponding proteins. The invention also relates to methods for assessing the expression level of these genes. The method comethods for testing the predisposition of mammals and preferably humans comes for a heart disease or for an acute state of such a disease. It is also useful to treat diseases of the heart such as congestive heart failure, compathy, specific heart muscle disease, rhythm and conduction disorders, myopathy, specific heart muscle disease, rhythm and conduction disorders, compathy, specific heart muscle disease, rhythm and conduction disorders, compathy, specific heart muscle disease, rhythm and conduction disorders, compathy, specific heart disease, valvular compations, pulmonary heart disease, valvular compations, pulmonary heart disease, valvular condocarditis. Sequences of the invention are also used in gene therapy. Care useful for the development for medicaments for the treatments of heart diseases. The present sequence is 66214 protein encoded by an

Csl protein is localised to the nucleus and does not show CC significant homology to any known protein. Structural homology between CC (Csl and scallop regulatory myosin light chain is however detected. It is predominantly expressed in heart and skeletal muscles and is activated after the differentiation of cells. Csl functions in regulation aspects of differentiation or adaptive processes that maintain muscle CC homeostasis. This sequence can be used in the detection, diagnosis, prophylactic and therapeutic treatment of diseases such as those CC involving aberrant muscle cell development and functional activity. It is also used in the treatment of muscular dystrophy and Becker's myotonic dystrophy, heart failure, cardiac hypetrophy, myocarditis, cmyofiber atrophy, etc. The Csl gene sequence can also be used in gene CC therapy, for the production of transgenic animals and for drug screening.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC polynucleotides are also used in diagnostics as expressed sequence tags
CC for identifying expressed genes. (I) is useful in gene therapy techniques
CC to restore normal activity of (II) is useful in gene therapy techniques
CC (II), (II) is useful for generating amtibodies against it, detecting or
CC quantitating a polypeptide in tissue, as molecular weight markers and as
CC a food supplement. (II) and its binding partners are useful in medical
CC imaging of sites expressing (II). (I) and (II) are useful for treating
CC disorders involving aberrant protein expression or biological activity.
CC The polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. ABG00010-ABG30377 represent novel human
CC diagnostic amino acid sequences of the invention.
CC Mote: The sequence data for this patent did not appear in the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                       RESULT 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.
                                                                                                                                                         The polypeptide and polynuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2001-639362/73
                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 20; SEQ ID No 54109; 103pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (HYSE-) HYSEQ INC.

che will Type of Island, or the plant of phenotype as compared to a wild-type or reference plant, or the plant of cexhibits ectopic expression or altered expression of one or more genes associated with a plant trait as compared to a wild plant. Also included or readable medium having stored sequence information, and identifying a computer or recombinant polymucleotide information, and identifying a computer or compose comprising inputting sequence information. The isolated or compiled trait, the method comprising selecting a plant having a composited trait, the method comprising selecting a plant having a composited trait, the method comprising selecting a polymucleotide that or an expression vector, or introducing the vector into a plant or a cell of a plant to overexpress complant, and selecting for a modified trait (e.g. increased plant, and selecting for a modified trait (e.g. increased producing a modified composition of agriculturally useful proteins or metabolic chemicals, pest tolerance, herbicide resistance, seed and fruit yield, growth of sease resistance, herbicide resistance, seed and fruit yield, growth of secification). The present sequence is one of the 232 proteins which are contained transcription factors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     22-AUG-2000;

The inventi useful in developmental biology and in elucidating cell signalling a cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABL9737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                    1044 QKPTSPVKKLKMPNININVHALLPGSGSVPKLIRKQESSSSER--DEPQATVQTEAEAPS 1101
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published oct sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2001-656860/75.

                                                                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polynucleotides are also used in diagnostics as expressed sequence tags of for identifying expressed genes. (I) is useful in gene therapy techniques to restore mormal activity of (II) or to treat disease states involving CC (III). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of eltes expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. 밁 S

17-NOV-2000; 2000WO-IL00766

25-MAY-2001.

Homo sapiens.

disorder;

Angiotensin converting enzyme splice variant; ACEV; interleukin 6; granulocyte colony stimulating factor receptor; glucagon, hypertrophy; platelet-derived endothelial cell growth factor; cardiovascular disease; cellular tumour antigen P53; cyclin-dependent kinase inhibitor 1C; vasoactive intestinal polypeptide receptor 2; arteriosclerosie; cancer; myocardial infarction; coronary arterial thrombosis; renal disease; diabetic nephropathy; muscular disease; immune disorder; sarcoidosis; multiple sclerosis; immune complex nephritis; deep vein thrombosis; monarcoidotic pulmonary granulomatous disease; endothelial abnormality;

Angiotensin converting enzyme (ACEV) splice variant protein #19.

12-SEP-2001 AAU02919
